

Zardband pharmaceuticals company, now a leading company in cultivation of medicinal plants in Iran, started its road in 1993 in a botanical garden in Zardband, a village located in north of Tehran.

Zardband is holding a medicinal plants gene bank including 120 species of selected seeds. Focusing on Iran's endemic plants, regarding the unique phytogeographic regions in Iran, the company is now cultivating more than 40 species of medicinal plants in hundreds of hectares of farms across the country following GAP standards, producing the highest quality raw material to be used in its wide range of end user products in addition to being sold on global markets of medicinal plants.

Besides providing more than 50 products to the end user markets, we are now a main supplier of medicinal plants extracts for various industries in Iran and around the world.

Benefiting from the company's 20 year experience in cultivating medicinal plants, the R&D department and its hard working scientists, researchers and technicians in Pharmacology, Pharmaceutics and Phytochemistry are continually working in two main fields of activities; optimizing various production procedures to ensure the highest quality in the raw materials provided, and developing new products based on specific market studies and health concerns of the society.

* Green flavor oral drops (TS) are a group of products by Zardband Pharmaceuticals ; the highly concentrated and pure natural flavors which are used in foods, salads, or drinks, for their mellow flavor and fragrance, besides health benefits.
